Competition between (Gen)AI platforms
What dimensions do GenAI platforms compete in?
Core model quality
Ecosystem variety
User numbers
Transaction quality and generativity
Openness has advantages in some of these dimensions (most notably variety and generativity),
but could this lead to a loss of diversity at the market level?
Data economies, ecosystem-user virtuous cycle, generativity attracting more users etc.
→ WTA effects leading to a single dominant GenAI platform (and what can competition
policy do about it)?
